

RECENS®

Your Golden Message

How to create your message and write it to the NFC chip

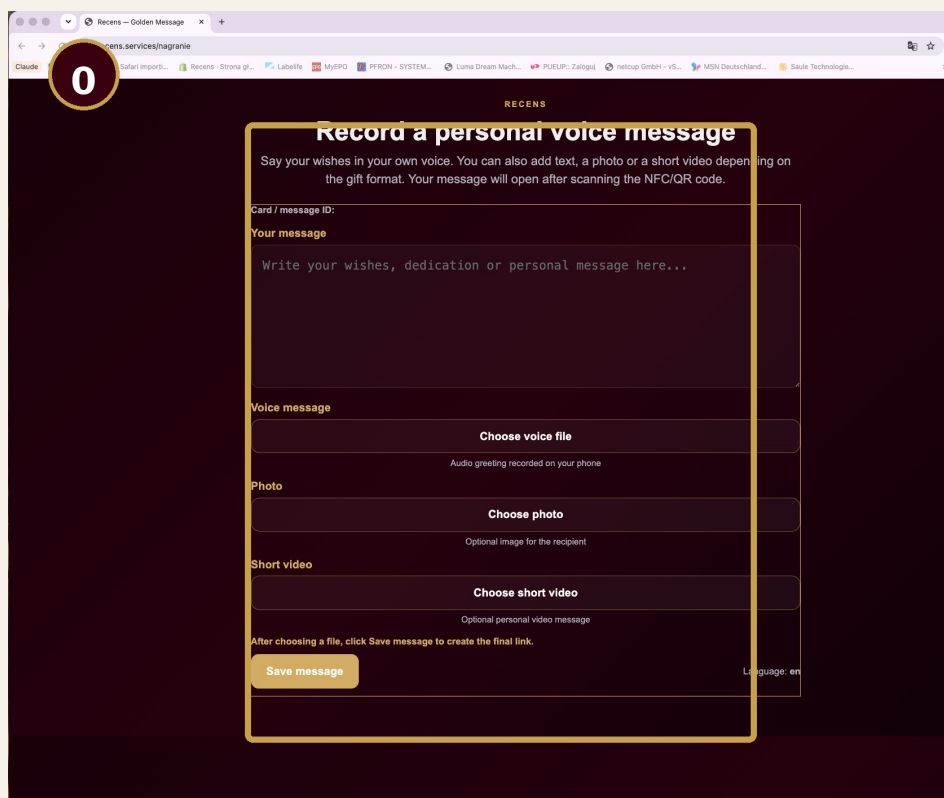

Detailed step-by-step guide

Text • voice • photo • short video

Create your personal message

After purchase, you will receive an e-mail from Recens containing your personal, secure link. Clicking this link should take you directly to the message creation page.

Important: do not enter any number or address manually. Always use the link received in your Recens e-mail.

1. Enter your wishes or personal written message.
2. Optionally add a prepared audio file, photo or short video.
3. Tap Save message.
4. After saving, copy the final link to your message. You will write this link to the NFC chip.

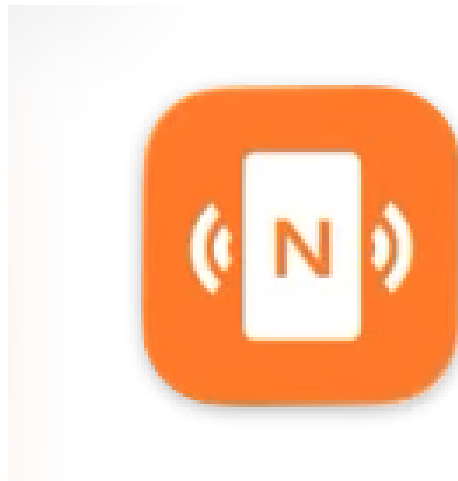

Write the link to the NFC chip

Use the NFC Tools app, available for iPhone and Android. The app screens are shown in English so the layout remains consistent in every language version.

STEP 1

Download NFC Tools

Download the official NFC Tools app from the App Store or Google Play. Identify it by the orange icon with a white phone and the letter N.

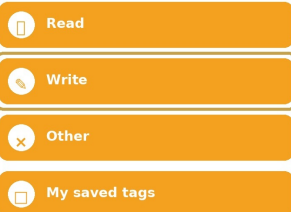

10:58

● Wi-Fi 100%

2

NFC Tools

Welcome to NFC Tools

STEP 2

Select “Write”

On the home screen, tap Write. This section of the app is used to write data to the NFC chip.

STEP 3

Add a new record

Tap Add a record. This record will contain the link to your message.

10:58

● Wi-Fi 100%

Search

Add a search link

STEP 4

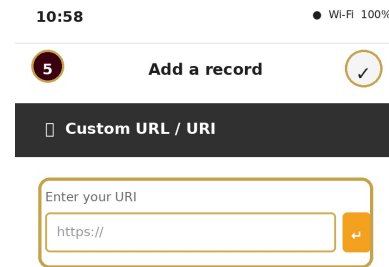

Select “Custom URL / URI”

From the list of data types, select exactly Custom URL / URI. Do not select the regular URL / URI option.

STEP 5

Paste your message link

In the Enter your URI field, paste the final link generated after saving your message in the Recens portal. Do not enter the example address shown in this guide.

10:58

● Wi-Fi 100%

6

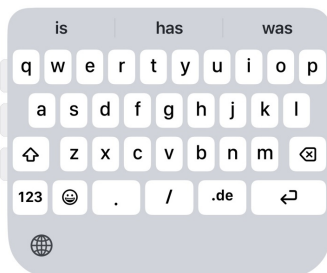

Add a record

Custom URL / URI

Enter your URI

https://recens.services/r/your-order

STEP 6

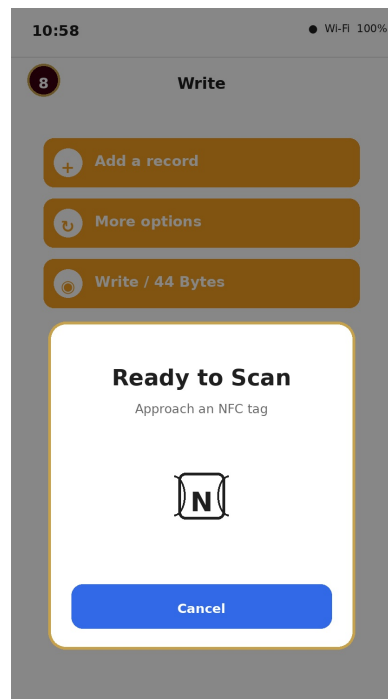

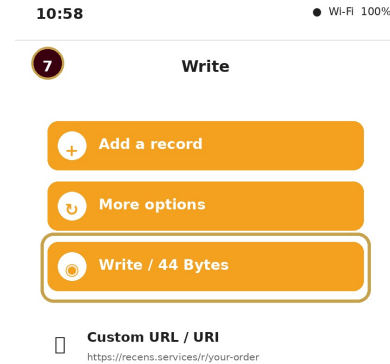

Confirm the entry

After pasting the complete link, tap the ✓ in the upper-right corner. The app will return to the Write screen.

STEP 7

Start writing to the chip

On the Write screen, you will see the added address and a button such as Write / 44 Bytes. The byte count may differ depending on the link length. Tap this button.

STEP 8

Hold the phone to the NFC chip

When Ready to Scan appears, hold the top part of your phone against the NFC chip. Keep it still until you hear a signal or see confirmation that writing was successful.

Check that the chip works

After writing, close NFC Tools. Unlock your phone and hold it against the chip again. The phone should detect the chip and display a notification leading to your personal Recens message.

✓	The correct message opens
✓	Text, audio, photo or video works
✓	The link does not lead to the home page or unrelated content
✓	The chip was tested before the gift was given

If writing is unsuccessful:

1. Remove the phone case.
2. Hold the phone against a different area of the chip.
3. Check that the complete link beginning with https:// was added in NFC Tools.
4. Tap Write again.

Done. Your Golden Message has been created and the NFC chip programmed.

You can now give the gift with confidence.
